

Claim 1 (original): A device for opening a human bladder comprising:

- an oblong member for opening the urethral sphincter, said oblong member comprising means for draining fluid from the bladder, and
- a guide member for manipulating the oblong member,

wherein the guide member in a first configuration is bend and the guide member allows unfolding from said first configuration into a second configuration allowing for insertion of the oblong member in a urinary tract.

Claim 2 (original): A device according to claim 1, wherein the cross-sectional area of a major part of the guide member at least in said first configuration is substantially smaller than the cross-sectional area of the oblong member.

Claim 3 (currently amended): A device according to claim 1 ~~or 2~~, wherein in said second configuration the cross sectional area of a major part of the guide member is smaller than the cross-sectional area of the oblong member.

Claim 4 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein the guide member in said first configuration is rolled.

Claim 5 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein at least a part of the guide member in said first configuration is bend by an essentially elastic formation of said guide member.

Claim 6 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, packed in said first configuration, wherein the guide member is adapted to unfold upon un-packaging of the device.

Claim 7 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein the guide member is made of metal or from a polymer material or from a composite material.

Claim 8 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein the guide member comprises gripping means.

Claim 9 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein the device further comprises a slack tube, the slack tube being less rigid than the oblong member.

Claim 10 (original): A device according to claim 11, wherein the slack tube and the oblong member is provided in one piece.

Claim 11 (currently amended): A device according to claim 9 ~~any of the claims 9-10~~, wherein the slack tube is longer than the guide member.

Claim 12 (currently amended): A device according to claim 9 ~~any of the claims 9-11~~, wherein the slack tube comprises gripping means allowing the user to grip the slack tube for removing the oblong member from a urinary canal.

Claim 13 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein at least part of the device is provided with a surface which is hydrophilic.

Claim 14 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein the oblong member is solid.

Claim 15 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, wherein the oblong member allows storage in a bend configuration.

Claim 16 (currently amended): A device according to claim 1 ~~any of the preceding claims~~, further comprising a guiding device with a compartment for guiding drained urine, the guiding device being adapted to convey the oblong member from the compartment and into a urinary canal.

Claim 17 (original): A device according to claim 16, further comprising a receptacle in fluid communication with the compartment of the guiding device.

Claim 18 (currently amended): A device according to claim 16 ~~or 17~~, further comprising sealing means to seal between the compartment and the urinary canal.

Claim 19 (currently amended): A device according to claim 16 ~~any of claims 16-18~~, wherein the receptacle is formed in a flexible material allowing manipulation of the guide member through a wall of the receptacle.
